

Watch a chick hatch and grow!

Place the egg in water, wait for it to crack, then watch your chick break out of its shell and grow to four times its size!

Carefully remove the egg from the packaging and place in a large glass of room temperature water.

Within 24-48 hours, your chick will crack through its egg and begin to grow.

Remove your chick from the glass after it has stopped growing. This could be up to 5 days. Discard egg shells in trash.

**Grows
4x its
size!**

Your chick will return to its approximate original size if left out of water. It will grow again when placed back in water!

Hatch them all!

**Uncle
Milton.**
